

## MCZ – Upper Fowey and Pont Pill (FS29)

*Intertidal sand and muddy sand – A2.2*

---

### **SNCB**

---

Presence – Moderate    Extent – Moderate

Data Sources:

- MB102 task 2i (polygon data)

Comments – Presence of feature and parent feature shown by habitat map (MESH 41.6).  
Habitat extent supported by a habitat map from survey covering 100% of feature.

---

### **MB0116**

---

Presence – High    Extent – High

Data Sources:

- MB102 task 2i (polygon data)
- MESH points (2 points)
- CCO 2009 aerial imagery covering the MCZ "Image courtesy of the Channel Coastal Observatory" 2013

Comments - 2 feature (A2.2) data point records within the rMCZ; one of which is overlapping feature polygon. 1/1 (100%) parent (A2) feature data point overlapping with feature polygon.

---

### **Possible reason for difference**

---

MB0116 had access to additional point data and CCO aerial photography which were not accessed by the SNCBs for this feature. It is worth noting, however, that if MB0116 had only used the data accessed by the SNCB's the highest score for both presence and extent would have been Low suggesting a different methodology has also been applied.
