

MCZ – The manacles (FS32)

Subtidal mixed sediments – A5.4

Natural England

Presence – Moderate Extent – Moderate

Data Sources:

- MESH (polygon data)

Comments – MESH score is 61.667. 100 % of L3 BSH points agree with map data. Reduced to M as no validation points within feature

MB0116

Presence – Low Extent – Low

Data Sources:

- MESH (polygon data)

Comments - MESH confidence score 62. One (out of 2) parent data points agree with the feature polygon (50%).

Possible reason for difference

The difference between NE and MB0116 confidence scores is due to methodology as without multiple validating data points only a low score can be achieved for both presence and extent using the MB0116 approach.
