

North St George's Channel 1 (RRA B) Evidence Review

Region	Irish Sea Conservation Zones	
Site Name/number	North St George's Channel 1 rRA ISCZB	
ENG Features present and proposed for inclusion within MCZ designation	BSH	<ul style="list-style-type: none"> High energy circalittoral rock Moderate energy circalittoral rock Subtidal coarse sediment.
	Habitat FOCI	<ul style="list-style-type: none"> Subtidal sands and gravels.
	Species FOCI	-
ENG Features present but not proposed for inclusion within MCZ designation	BSH	-
	Habitat FOCI	-
	Species FOCI	-
Non-ENG Features (Geological/geomorphological)		-

Evidence Summary – data provided by Regional MCZ Project

Feature	Evidence Summary	Key Sources
High energy circalittoral rock	Data polygon based on predictive modelling from MESH/UK SeaMap (I.D. GB001055, MESH confidence score 0).	UK SeaMap
Moderate energy circalittoral rock	Data polygon based on predictive modelling from MESH/UK SeaMap (I.D. GB001055). Eight datapoints from MESH (I.D. MRMIT600000000310)	UK SeaMap MESH
Subtidal coarse sediment	Data polygon based on predictive modelling from MESH/UK SeaMap (I.D. GB001055, MESH confidence 0) and five survey data points (survey I.D. MRMIT600000000310 occur within the polygon.	UK SeaMap MESH
Subtidal sands and gravels	Two data polygons from project MB0102 (1 x I.D. GB000039) and 1 modelled polygon with no I.D.). Five survey datapoints sourced from MESH (all survey I.D. MRMIT60000000031).	MB0102 MESH

Description of New Evidence Identified by MB0116 project

Evidence Description	Source	Feature
Habmap_Points_181109_RA	HabMap (2009), K. Mortimer and H. Wilson	Moderate energy circalittoral rock

Evidence That Could Not Be Acquired by MB0116 project

No new evidence identified
