

## **WC1072: Assessing change in the timing of biological events in Spring for the UK and England, 1891 - 2012**

This is a financial contribution from Defra to a larger project. The UK Government and Devolved Administrations are committed to safeguarding biodiversity across the UK and contributing to efforts to reduce rates of biodiversity decline. Having a flexible framework of indicators is key to ensuring efficient, transparent and evidence-based reporting on progress towards targets at international, European, UK and country scales. This contribution is to provide an annual update the timing of biological events in Spring, for inclusion in the UK and England biodiversity indicator publications.

The UK and England indicators are published annually online:

UK - <http://jncc.defra.gov.uk/>

England - <https://www.gov.uk/>
