

Figure 26. Observed versus predicted methane production for lactating cattle model MER + NDF vs CH4 (Equation M9) for the evaluation data set (dashed line). The solid line represents the line of unity.....49

Figure 27. The relationship between dry matter intake and methane energy as percentage of gross energy intake for all cattle. The solid line represents model DMI vs CH4 as %GEI (Equation M5).....50

Figure 28. Observed versus predicted methane energy as percentage of gross energy intake for cattle model DMI vs CH4 as %GEI (Equation M5) for the evaluation data set (dashed line). The solid line represents the line of unity.....51

Figure 29. The relationship between dry matter intake and methane energy as percentage of gross energy intake for lactating cattle. The solid line represents model DMI vs CH4 as %GEI (Equation M12).....52

Figure 30. Observed versus predicted methane energy as percentage of gross energy intake for lactating cattle model DMI vs CH4 as %GEI (Equation M12) for the evaluation data set (dashed line). The solid line represents the line of unity.53

Figure 31. The relationship between dry matter intake and methane energy as percentage of gross energy intake for non-lactating cattle. The solid line represents model DMI vs CH4 as %GEI (Equation M15).....54

Figure 32. Observed versus predicted methane energy as percentage of gross energy intake for non-lactating cattle model DMI vs CH4 %GEI (Equation M15) for the evaluation data set (dashed line). The solid line represents the line of unity.55

Figure 33. Models of methane emissions as percentage of gross energy intake relative to dry matter intake.....56

Figure 34. The relationship between dietary ether extract and methane production for all cattle.....58

Figure 35. The relationship between dietary ether extract and methane energy as a percentage of gross energy intake for all cattle.....59

Figure 36. The relationship between dietary starch:ADF ratio and methane production for all cattle.....60

Figure 37. The relationship between dietary forage:concentrate ratio and methane production for all cattle.61

Figure 38 The relationship between dietary forage:concentrate ratio and methane yield for all cattle.....62
