Appendix A: Initial brief and summary of final approach, methodology and outputs

Initial DEFRA brief for CTE9806 Management of Archaeological Sites in Arable Landscapes

Introduction

Presentation of results

Methodology

Overall approach

Methods

Stage 1 - Identification of issues: review of existing relevant literature

Stage 2 - review of issues

Stage 3 - Creating Methods to predict the risk of cultivation to archaeological sites

Stage 4 - Evaluating and testing the models

Stage 5 - Developing “best practice” options for management of archaeological sites in
arable for different circumstances

Stage 6 - Report preparation

Stage 7 - Preparation of guidance for farmers

Appendix B: Details of regional plough damage studies

Regional plough damage surveys

Introduction

National studies

Norfolk

Cambridgeshire

Suffolk

Devon

The Cotswolds

Dorset

Hampshire

Sussex

Lincolnshire

Wiltshire

Yorkshire

Wales

Peak District

Northamptonshire

Warwickshire and Worcestershire

West Midlands

East Midlands

Scotland

English Heritage’s Monuments at Risk Survey

Appendix C: Legislation and policy for archaeological conservation

Legislation and international obligations

Underlying principals

International obligations

Ancient Monuments Legislation

Town and Country Planning Acts

The Agriculture Act 1986, Water Industry Act 1991 and Environment Act 1995

Wildlife and countryside

Sustainable development

Sustainability

Rural development, Agri-environment Policy and Codes of Good Practice

Agri-environmental policy and trends

Best practice

Recent and future trends

Appendix Di: Introduction to arable issues

Introduction to arable issues

Introduction

The arable area

Technical aspects

Policy/economic aspects

Appendix Dii: The relationship between agronomic factors and archaeological survival and the advantages of minimal cultivation and direct drilling techniques

The relationship between agronomic factors and archaeological survival and the advantages of minimal cultivation and direct drilling techniques

Introduction

Crop characteristics and requirements

Rotations

The equipment

Geological considerations

Economic considerations

Conclusions

Appendix Ei: Introduction to erosion issues

Introduction to erosion issues

Background

Forms and processes of erosion in the UK

Rates of erosion

Assessment of erosion risk

Temporal variations in erosion

Appendix Eii: The relationship between erosion and archaeological survival on arable land

The relationship between erosion and archaeological survival on arable land

Introduction
 Rainfall/wind
 Soil character
 Crops and farming practice
 Slope and topography

Appendix F: Case studies of archaeological damage from arable activities

Types of damage to archaeological sites caused by different activities

Introduction
 Cultivation of previously uncultivated sites
 Understanding cropmarks/soilmarks
 Lateral erosion on archaeological sites
 Deeper ploughing (or subsoiling) of existing arable or grass leys on already cultivated sites
 Potato cultivation
 Sugar beet
 Energy crops
 The effective deepening of cultivation caused by soil erosion/solution and compaction
 Physical damage of artefacts in the ploughsoil
 Chemical effects on buried archaeological artefacts and deposits
 Movement of artefacts
 Ancillary ground disturbance and impacts associated with arable

The threat to wetland archaeology including the lowering of water tables and peat wastage

Archaeological potential of wetlands
 The conversion of the wetlands
 Lowering of the water table and the loss of waterlogged deposits
 The effects of peat erosion
 Peat wastage rates

Intrinsic site factors that influence damage to archaeological sites in arable landscapes

Type and condition of archaeological remains
 Previous cultivation/landuse
 How soil type/bedrock can affect archaeological survival
 The effects of topography, climate and soil erosion on archaeological sites
 case study showing the interplay between site intrinsic factors, including cropping

Appendix G: Site-specific risk assessment and monitoring

Approach to developing a rapid risk assessment method

Introduction

The Flow Diagram Method

Stage by stage guide to using the Flow Diagram Method

The Scoring Method

Confidence grading

Testing the rapid risk assessment methods

Initial testing of the site-specific methods

Testing the revised assessment methods

Results of testing the revised assessment methods - a) usability of methods

Results of testing the revised assessment methods - b) accuracy of methods (testing through excavation)

Results of testing the revised assessment methods - b) accuracy of methods (testing without excavation)

Limitations and further development

Comparison with other approaches

Introduction

Monuments @ Risk Survey (MARS)

Existing English Heritage monitoring procedures

New English Heritage @ Risk Pilot

Existing schemes to monitor condition of monuments using aerial photographs

National Trust monitoring procedures for volunteers

Agri-environment schemes

Regional studies

Practical techniques to assess risk

Appendix H: National Model of Plough Damage and Statistics

The National Picture

Correlations between Risk Mapping and Archaeological Datasets

Cropping Changes between 1990 and 1999

Correlations between Risk Areas and ESA and CSS Coverage

Correlations between Risk Areas and Suitability of Direct Drilling

Appendix J: Work Commissioned as Part of this Study and Stand Alone Documents of Unpublished Archaeological Work

Ji: The Effects of deep Ploughing on Archaeological Deposits, Hayton, East Yorkshire - A Case Study, Nov 2001, by P Halkon, University of Hull. OA Commissioned report

Jii: The Impact of Potato Growing on Archaeological Sites 2001 P White and J Cotton, Herefordshire Archaeology. OA commissioned work

Jiii: Effects of Past and Present Ploughing on the Prehistoric Monuments: in Wyke Down, Cranborne Chase, Dorset, Case Study, Dec 2001 by Dr C French, University of Cambridge. OA commissioned report

Jiv: Archaeology, Arable Landscapes and Drainage in the Fenland of Eastern England, Feb 2002, by T Lane and J Honnor, Archaeological Project Services. OA commissioned work

Jv: The Effects of Agriculture on Selected Archaeological Sites within the Cambridge County Farms Estate, Oct 2001, by J Abrams and S Macaulay, Cambridgeshire County Council Archaeological Field Unit. OA commissioned work

Jvi: Land Adjacent to Brierlands, Garforth, West Yorkshire, Archaeological Evaluation, Nov 2001, by I Roberts and L Martin, West Yorkshire Archaeological Services. OA commissioned work

Jvii: Resurvey of the Whispering Knights, Rollright Stones, Oxfordshire by the Rollright Trust 2002. OA commissioned work

Jviii: Tennyntrey Farm, Rockbourne, Long Barrow (CfA site 236), draft topographic survey report text by T Cromwell, English Heritage March 2002. English Heritage. Unpublished report, collated for this project

Jix: Archaeology beneath and within the ploughsoil: a case study, Owmbly, Lincolnshire, by F McAvoy, English Heritage May 2002. Unpublished report, collated for this project.

Appendix K: Consultations

Consultations and presentations

Steering group

Seminars and lectures and papers

Respondents to written consultations

Initial consultation

Specific consultation on issues

Specific work carried out for the project

Initial questionnaire

Appendix L: Bibliography
